

EKRN - Rønne

Overview

Rønne, or Bornholm, Airport is the fifth largest in Denmark. Originally built in 1940 built by the local commune to ensure frequent and convenient travel between the island and Copenhagen. In 2023 202.000 passengers used the airport.

ALWAYS remember, if you are unsure or in doubt then ask. We will always do our best to help you out!

Use of stands

In Rønne, there are 3 main aprons.
Apron East is the primary passenger parking.
Apron West is for private A/C
GA parking (North) is a grass field.

IFR clearance

Initial contact is with Tower. As Bornhold is surrounded by Swedish Airspace, the clearance comes via Sweden. Therefore you can expect some delay in your clearance, and quite often you will get start-up and taxi before the clearance is obtained.

Remember to state if you require the latest MET-Report.

As there are no SIDs in Rønne your departure clearance will sound like this:

"Sweden control Clears you to Destination via [Point]/[Flightplan route], 4000', expect level change, squawk 1234, after departure Direct [Point]"

Push-back

All stands are taxi-out. No pushback required.

Taxi

Runways

SIDs

STARs

Approach

Ronne is a procedural tower meaning they have no radar. Therefore you will never receive vectors.

Direct routings
