

Introduction

VATSCA releases its sector files in collaboration with AeroNav through the dedicated AeroNav sector file website. This means that sector files for Denmark must be manually installed and applied in EuroScope in order to function correctly. They cannot be downloaded automatically.

This guide will walk you through the initial installation of EuroScope, followed by your first sector file installation, and finally how to update your sector files when new versions are released.

The Copenhagen FIR currently uses the following version of EuroScope:

<https://euroscope.hu/install/EuroScopeSetup.3.2.3.2.msi> ↗

Revision #4
