

CDM Commands

All commands are typed in the EuroScope command line.

Command	What it does	Who uses it
.cdm master ICAO	Become CDM master for an airport (e.g. <code>.cdm master BIKF</code>). Only one master per airport.	Lowest position at the airport
.cdm slave	Give up master. Use before a handover or before logging off.	Current master
.cdm rate	Reload the departure rates (<code>rate.txt</code>) after they have been changed.	Master
.cdm flow	Reload flow measures (ECFMP/ATFCM restrictions).	Master
.cdm server	Turn communication with the CDM server on or off. Leave it on unless told otherwise.	Troubleshooting only
.cdm help	List all available commands.	Anyone

List actions

Action	How	Effect
Sort by TSAT	Click the TSAT column header	Orders the list by start-up sequence
Ready TOBT	Right-click the TOBT	Sets the TOBT to now and recalculates, looking for an earlier TSAT
Start-up requested	Click ASRT	Records the request, protects the flight from invalidation and gives priority for an earlier TSAT

Action	How	Effect
Start-up approved	Set status to STUP or PUSH	Records ASAT and releases the flight

See **Starting CDM & handing over master** for when to use master and slave.
